

## Sprint 2 Network Diagram:

### CSCC01 Perfect Strangers Sprint 2 User Story Dependencies

#### Steps to stay on schedule:

- Have frequent standups to identify blockers throughout the sprint.
- Timely responses to questions posed in Slack.
- Proper use of Jira to document completed stories.

#### Critical Path

- The critical path of this diagram is from CGP-11 to CGP-10 through CGP-25 and CGP-16.
- We were unable to complete CGP-25 because of its dependencies, however CGP-11 is completed but cannot be fully implemented until CGP-25 is complete.
- Completion of CGP-16 was delayed because of unforeseen overlap between it and CGP-10, slowing down development and leading to an unfinished CGP-25.

**What we learned:** We need to be more aware of potential dependencies when assigning user stories for a sprint in future. Look for overlaps in user stories during future sprint planning meetings.
