Sprint 4 Network Diagram:

CSCC01 Perfect Strangers Sprint 4 User Story Dependencies

Dependent ——————————→ Depended on

Xin Yi: CGP-28	Beatrice: CGP-22	Bharath: CGP-13
		Bharath: CGP-5

Jeremy: CGP-27	← Athul: CGP-26	Farhan: CGP-6
		Farhan: CGP-19
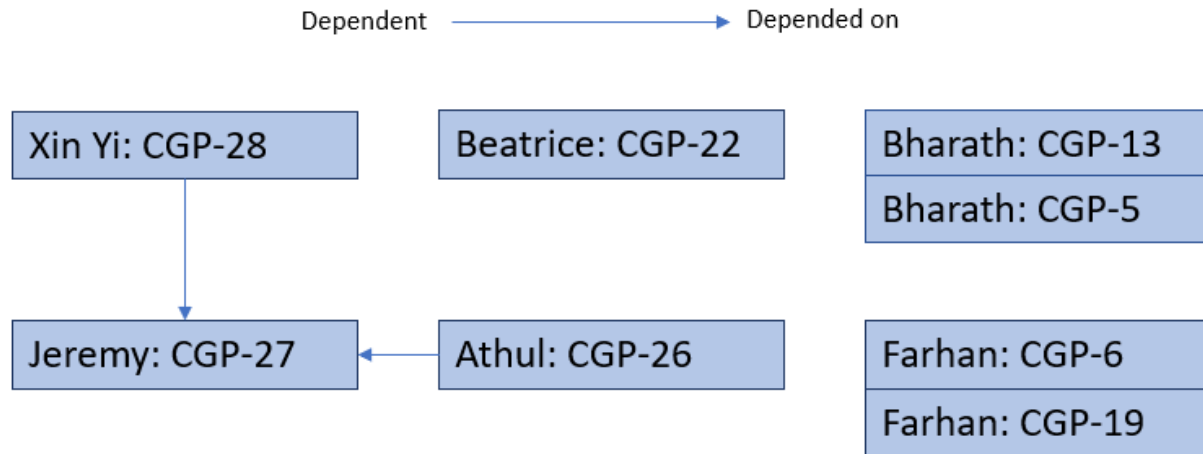

Steps to stay on schedule:

- Discuss user story scope and pathway in greater detail during the planning meeting to ensure development goes smoothly from the start.
- Running standups every two days, allowing us to keep on track of our own and others' work, resolving any blockers along the way.
- Update progress of user stories on Jira to provide small updates to the team throughout the sprint.

Critical Path

- The critical path of this diagram is from CGP-28 or CGP-26 to CGP-27.
- Despite having 2 dependencies, they were dependencies that were easily remedied once we implemented the schema and routes files.
- We were able to complete all user stories this sprint because we aimed to balance dependencies between sprints 3 and 4, allowing a dependency in sprint three to save us an additional one in sprint 4.

What we learned:

- We learned that focusing on the dependent parts of our user stories first means the team can work independently for most of the sprint without worries of the dependencies.
- Despite sprints being somewhat self-contained, we learned how beneficial it is to plan for dependencies in future sprints as well as the current one.
